MEMO HAMMER

Car body hammer with memory effect

Car body hammer with memory effect.

The hammers are designed to work on car body panels. The face of the hammers have a special milled surface which applies a shrinking effect during denting out at use with a dolly.

Everybody is holding a tapping differently. Due to a variable heat treatment and the geometry of the heads the memo hammer will personalize itself after while to the user.

Which means that the hammer will adapt itself to the habits of the user and change the surface angle.
