

SOFTLOCK 4504

Downgeared pliers for Flat Hose clamps

The Soflock pliers are designed to open and close flat hose clamps on rubber boots on drive shafts.

For example Oetiker hose clamps.

New designed drive shafts request harder and thicker rubber boots.

In order to avoid leaking of grease new stronger hose clamps are used which need a high force to lock.

The Soflock pliers are downgeared in order to reduce users efforts to open and close the hose clamps.

Technical Specs

Material : Xc48 Steel hardened
Weight : 322g
Lenght: 248mm
