Art. N° G3992-03

Tie rod remover

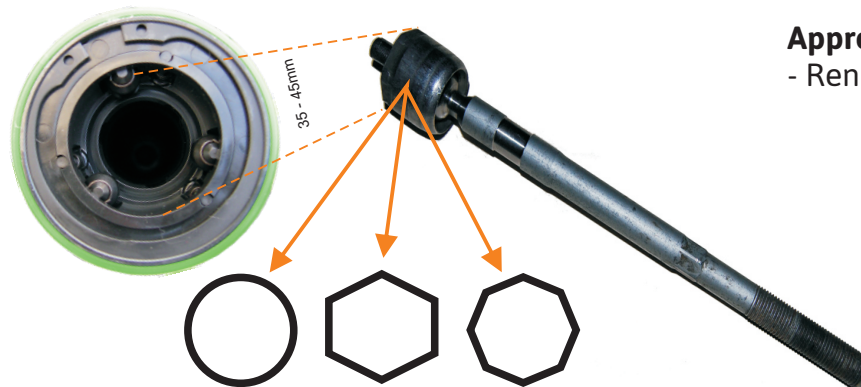

(Patent Pend.)

Special tool for removing and mounting ball joints on tie rods. The tool can be used universal for round and hexagon joints.

Thanks to a patented mechanism, the tool works at diameters from 35- 45mm, without changing sockets or roll inlets. Due to the slim head it is also possible to work in narrow spaces.

To unlock or tight the joints, the tool is simply slid over the joint and turned left or right.
